## Projectile Motion <br> 'Launched at an Angle' Virtual Lab

## Learning Targets:

I can name the factors that affect how far a projectile will travel before hitting the ground.
I can design experiments to carefully test ONE experimental question at a time.
Define the following terms, and answer the questions below:

1. Initial speed: $\qquad$
Hypothesis: Do you think this would affect the range of a projectile? Circle YES or NO.
2. launch angle: $\qquad$
Hypothesis: Do you think this would affect the range of a projectile? Circle YES or NO.
3. projectile's mass: $\qquad$
Hypothesis: Do you think this would affect the range of a projectile? Circle YES or NO.

## What is the effect of launch velocity (initial speed) on range?

Take out your laptop. Go to "bitly.com/phet-projectile". Get acquainted with the projectile simulator.
4. Conduct an experiment to determine how initial speed affects the range of a projectile.

What will be your independent variable? $\qquad$

What will be your dependent variable? $\qquad$
5. Make a table and a sketch to record your results.

| Set launch angle to $30^{\circ}$. Select the football. |  |
| :---: | :---: |
| Initial speed | Range |
|  |  |
|  |  |
|  |  |
|  |  |

6. Conclusion: Explain what you found about the effect of initial speed on the range of a projectile.

## What is the effect of launch angle on range?

7. Conduct an experiment to determine how launch angle affects the range of a projectile.

What will be your independent variable? $\qquad$

What will be your dependent variable? $\qquad$
8. Make a table and a sketch to record your results. Use the launch angles provided

| Set launch velocity to $40 \mathrm{~m} / \mathrm{s}$. Select the football. |  |
| :--- | :---: |
| launch angle | range |
| $15^{\circ}$ |  |
| $30^{\circ}$ |  |
| $40^{\circ}$ |  |
| $45^{\circ}$ |  |
| $50^{\circ}$ |  |
| $60^{\circ}$ |  |
| $75^{\circ}$ |  |

9. Conclusion: How was range effected as launch angle increased from $15^{\circ}$ to $45^{\circ}$ ?

How was range effected as launch angle increased from $45^{\circ}$ to $75^{\circ}$ ?

## What is the effect of projectile mass on range?

10. Conduct an experiment to determine how mass affects the range of a projectile.

What will be your independent variable? $\qquad$
What will be your dependent variable? $\qquad$
11. Make a table and a sketch to record your results.

| Set launch velocity to $40 \mathrm{~m} / \mathrm{s}$. Set angle to $30^{\circ}$ |  |
| :--- | :--- |
| mass | range |
|  |  |
|  |  |
|  |  |
|  |  |

12. Conclusion: Explain what you found about the effect of mass on the range of a projectile.
13. Select the football with a launch velocity of $10 \mathrm{~m} / \mathrm{s}$. Complete the table below:

|  | Angle | Range | Time | Angle | Range | Time |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Pair one <br> $15^{\circ}$ and $75^{\circ}$ | $15^{\circ}$ |  |  | $75^{\circ}$ |  |  |
| Pair two <br> $30^{\circ}$ and $60^{\circ}$ | $30^{\circ}$ |  |  | $60^{\circ}$ |  |  |
| Pair three <br> $22^{\circ}$ and $68^{\circ}$ | $22^{\circ}$ |  |  | $68^{\circ}$ |  |  |
| Pair four <br> $40^{\circ}$ and__ | $40^{\circ}$ |  |  |  |  |  |
| Pair five <br> $5^{\circ}$ and_ | $5^{\circ}$ |  |  |  |  |  |
| Last pair <br> $45^{\circ}$ and $45^{\circ}$ | $45^{\circ}$ |  |  |  |  |  |

14. Compare the ranges of the angle pairs listed above. What is the sum of the angles that produce the same range?
15. Compare the time in the air for each of these angles, and explain any difference. Use the football and a starting velocity of $20 \mathrm{~m} / \mathrm{s}$.

Angle 1: $\quad \mathbf{1 5}^{\boldsymbol{o}}$ Time 1: $\qquad$ Angle 2: $\mathbf{7 5}^{\circ}$ Time 2: $\qquad$
Explain:

## Apply what you learned:

16. What advice about angle and kicking speed would you give to a punter who wants to maximize the distance of a punt? Why?
17. What advice about angle and speed would you give a punter that is not trying to maximize distance, but instead wants a long "hang time" to allow his teammates as much time as possible to get downfield?
